

VAN THIEN TUNG

Frontend Developer

☎ 0816466357 ✉ thientung57203@gmail.com 🔗 <https://github.com/tungvt2003> 📍 Thủ Đức, TP. HCM

OBJECTIVE

Frontend Developer with 1+ year of experience building scalable, user-friendly web applications using React/Next.js. Seeking to grow into a Senior Developer role, contributing to impactful projects with a focus on performance optimization, clean architecture, and modern UI/UX

EDUCATION

ACADEMY OF CRYPTOGRAPHY TECHNIQUES (KMA)

9/2021 - 9/2025

Information Security

GPA: 3.28/4.0

WORK EXPERIENCE

DANSOLUTIONS Technology Co., Ltd

08/2024 - Present

FRONTEND DEVELOPER

Project: FastCare – Phone & Laptop Repair System

Role: Frontend Developer & DevOps (basic CI/CD & staging setup)

Tech Stack: Next.js, Tailwind CSS, ShadCN UI, Zustand, RESTful API, Figma, GitHub Actions

Description:

FastCare is a web-based system consisting of two parts: a customer-facing website for product and service sales, and an internal admin dashboard for content and service management.

Responsibilities:

- Designed and implemented responsive UI based on Figma, optimizing layouts for better performance and UX.
- Developed core screens such as Blog, Service pages, and multiple Admin Dashboard modules.
- Built and customized reusable components to streamline development and maintain consistency.
- Integrated REST APIs and managed state with Zustand.
- Set up basic DevOps tasks, including CI/CD pipeline and staging environment deployment.

Project: Tamda Express – Logistics Management System

Role: Frontend Developer

Tech Stack: ReactJS (Vite), Tailwind CSS, Zustand, Socket.IO, RESTful API

Description:

Tamda Express is a logistics management platform with two main modules: admin dashboard and operations system.

Responsibilities:

- Designed and implemented UI based on provided mockups for all main modules.
- Developed CRUD features for drivers, vehicles, assistants, orders, and trip management.
- Implemented trip scheduling functionality: assign drivers, assistants, and orders to trips with map-based visualization.
- Integrated real-time updates via Socket.IO for trip and order changes.
- Implemented form validation, role-based access control, and optimized component rendering to handle large volumes of orders efficiently.

Project: Skyline Edu – Education Website & CMS

Role: Frontend Developer

Tech Stack: Next.js, Tailwind CSS, i18n, ShadCN UI, GitHub Actions, RESTful API

Description: Skyline Edu is an education platform consisting of: user website and CMS admin panel.

Responsibilities:

- Designed and implemented responsive UI based on Figma to ensure a user-friendly experience.
- Set up the project architecture and customized reusable components for scalability.

- Optimized SEO performance and implemented internationalization (i18n).
- Configured basic CI/CD pipelines using GitHub Actions and deployed the staging environment.

GREEN ACADEMY

09/2022 - 09/2023

IT Tutor / Teaching Assistant

Responsibilities:

- Tutored 50+ students in HTML, CSS, JS, ReactJS, and C/C++, providing debugging guidance, exercises, and extra classes to improve coding proficiency and assignment completion.

SKILLS

Frontend	ReactJS, Next.js, TypeScript, Tailwind CSS, ShadCN UI, Ant Design, React Hook Form, Yup
State Management	Zustand, Redux
Backend & DB	REST API, MySQL, MongoDB
Others	Git, GitHub Actions (CI/CD), i18n, SEO, Socket.IO,...
